

# SYSTEM AND METHOD FOR ROUTING DATA BY A SERVER

## Abstract of the Invention

5 The present invention provides a method and system for routing data by a server. Specifically, the present invention provides a table-drive method and system for allowing parties to send and receive data in their own data formats and transfer protocols. In routing data from a source to a destination, the present invention does not require transformation of the data to an intermediate format and/or protocol before transformation into the format and protocol of the destination.
